✦ Top Rated Plus on Upwork • ✓ 100% Job Success

ABOUT

Senior iOS engineer with 10 years in software, 9 of them building mobile apps — from GCash, the Philippines' largest e-wallet, to startups and self-published App Store apps. Owns features from idea to release, with a focus on clean, dependable code that teams can keep building on. Now applying AI agents to speed up product development.

EXPERIENCE

iOS Engineer

December 2025 – June 2026

Nmblr, Inc.

Contract · Philippines — Remote

- Built the app's Drive-Thru ordering flow, from menu options to the cart, using Clean Architecture
- Made the app privacy-compliant by adding a consent manager and reorganizing analytics tracking
- Added rules that block invalid coupons and cancel scheduled pickups once their rewards expire
- Shipped favorite stores, deep links to store pages, and instant card-brand detection at checkout
- Reduced crash risk by removing unsafe code across the app

iOS Engineer

January 2024 – November 2025

Milagro

Freelance via Upwork · United States — Remote

- Set up CI/CD so QA could get new test builds without waiting on developers
- Led the networking rewrite from callbacks to async/await, making it simpler and more reliable
- Moved sign-in into its own service, with tokens kept in the Keychain and refreshed automatically when sessions expire
- Introduced dependency injection and unit tests, making the codebase easier to change safely
- Fixed critical WebSocket issues for a more reliable real-time experience
- Set code-quality standards for the team, from automatic style checks to code-review guidelines
- Tracked down and patched a crash inside a third-party analytics SDK

iOS Engineer

January 2024 – February 2024

Studio

Freelance via Upwork · United States — Remote

- Built a custom video player with picture-in-picture that remembers where viewers left off
- Built swipeable, Tinder-style cards for browsing peers; fixed a major performance issue in image processing

iOS Engineer

June 2021 – December 2023

CircleIn

Freelance via Upwork · United States — Remote

- Built a Discord-style community chat that feels instant, using optimistic UI updates
- Built onboarding that matches students into study groups by shared interests
- Built flashcard games and a course-feedback tool for professors
- Refactored most of the codebase and added tests, making the app faster and easier to maintain

iOS Engineer

December 2018 – June 2021

Globe Fintech Innovations (Mynt) — GCash

Full-time · Philippines — On-Site

- Built Face ID / Touch ID login, with credentials kept in the Keychain
- Built QR payments from uploaded images and saved billers for bank transfers
- Integrated a mini-program platform that lets partners run their apps inside GCash and accept payments
- Integrated in-app advertising; resolved critical production issues and App Store rejections
- Reviewed code, added tests, and rolled out features gradually with feature flags

Mobile Engineer

August 2017 – August 2018

TAP Services, Inc.

Full-time · Philippines — On-Site

- Led two junior engineers — one on the iOS app, one on React Native
- Started a React Native app from scratch, setting up its structure and state management
- Handled App Store releases and set up automated builds

Junior Web Developer

August 2016 – August 2017

Smart Communications, Inc.

Full-time · Philippines — On-Site

- Built a reporting feature with charts and paged results
- Maintained and improved web apps built on C# / ASP.NET

PROJECTS

Quickworm — Free, AI-generated book summaries · 5.0★ on the App Store App Store ↗

- Built it from scratch, then cut running costs to $0 by moving AI summaries off a paid backend onto Firebase

SwiftUI · MVVM · Firebase AI Logic (Gemini) · App Check · Remote Config · CoreData · AdMob

Moneta — Budget tracker that works offline and syncs across devices · 5.0★ on the App Store App Store ↗

SwiftUI · SwiftData · Clean Architecture · Factory · WidgetKit · Firebase · IAP · Offline Sync

EZman — Food-delivery platform; led the customer and rider apps Customer app ↗ Rider app ↗

UIKit · MVVM · RxSwift · Moya · PubNub · Firebase · Google Maps · Push Notifications

BUILDING WITH AI

Kaha — Point-of-sale app for small Filipino stores

- As product owner, set the product and technical direction (Clean Architecture, offline-first) and designed a team of AI agents that plans, builds, and tests each feature, then hands it to QA

App Factory — AI agents that build iOS apps

- Designed a team of AI agents that turns an app idea into a finished App Store app; shipped apps include Dice Roller, Metronome, First Words for Baby, Bubble Pop

SKILLS & EDUCATION

LANGUAGES	Swift, Objective-C, JavaScript, C# / .NET
IOS	SwiftUI, UIKit, Combine, async/await, RxSwift, CoreData, SwiftData, StoreKit, WidgetKit, WebSockets
SECURITY	Keychain, LocalAuthentication (Face ID / Touch ID), Sign in with Apple, consent management
SERVICES	Firebase, Moya, PubNub, Braze, TrustArc, AdMob, React Native
AI	Firebase AI Logic (Gemini), OpenAI API, LLM integration, Claude Code agent teams
TOOLS	Git, GitHub Actions, Docker, Fastlane, SPM, CocoaPods, SwiftLint, XCTest
PRACTICES	MVVM, Clean Architecture, Dependency Injection, Figma, Jira / Linear / Trello, Public speaking
EDUCATION	BS in Information Technology — Central Luzon State University, 2011 – 2016
